PS

Firoj,

You are correct, the permit is with Lili for technical review. As you know, the permit was on hold for some time pending consideration of an alternative discharge route that would avoid the Honey Creek State Natural Area. An alternate discharge route was chosen, and a standards review was performed on this new route. We were only recently informed that the applicant decided to go back to their original discharge location to Honey Creek. Lili is currently reviewing the permit for discharge to Honey Creek, which is a very sensitive area and requires a thorough technical review. She is working diligently to complete the standards review, but these reviews to sensitive waterbodies require much consideration and time to complete along with the regular workload of permit reviews. We want to make sure we get it right the first time. We hope to complete the standards review for this permit within 30 days.

Thanks,
Peter

Subject: SILESIA PROPERTIES LP, Permit No. WQ0015688-001
Importance: High

Peter and Lili:

As we discussed on the subject permit, the permittee would like to move forward with our pending TPDES permit. Mr. Kelly Leach, Developer expressed interest in having NAPD and Public Meeting notice be combine but first we have to have internal memos done. I know Lili, you have the permit file. Do you know how soon we can expect your review and recommendation will be completed.

I am keeping April Hoh in the loop so once Standards memo done, she can have her Modeler help us getting modeling memo done as soon as possible.

Also, I am keeping Ashley McDonald, Staff Attorney and Alfonso Martinez, Permit Writer in the loop so they knows what will be next.

Thanks,

Firoj Vahora, Team Leader
